(base) samirthokal@Samirs-MacBook-Air ~ % docker run hello-world

Hello from Docker!
This message shows that your installation appears to be working
correctly.

To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
   (arm64v8)
3. The Docker daemon created a new container from that image which runs
   the   executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which
   sent it   to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
 $ docker run -it ubuntu bash
